

NERI Seminar Series, Roskilde

**10. Juni 2003 – 14:00**  
**DMU pavillon**

Örjan Gustafsson, Head, Environm. Processes Group,  
ITM, Stockholm University

*Host: Philipp Mayer, MIMI, DMU (phm@dmu.dk)*

# **Black Carbon (soot)** **– a key factor for** **the mobility and** **(bio)availability of** **aromatic pollutants**

The presence of »soot supersorbents« in soils and sediments  
leads to drastically reduced exposure concentrations

*Supported by the Danish Technical Research Council through the project  
»Analytical Technology to Determine Contaminant Activity  
– Direct Measurement of (Bio)available Organic  
Contaminants in Soil, Sediment and Sludge«*

National Environmental Research Institute (NERI)
